

ANTI-MOISTURE GRANULES

(Thin film and lamination)

(Tarpaulins use)

(Molding and chairs)

(Carry-bags, Linares etc.)

Anti Moisture Granules / Desiccant Masterbatch/ Bhej Dana / Moisture Remover

Desiccant Masterbatch is a compound of special mineral which can be used for removing moisture and resolving problems related to shine, surface finish and strength of Polymer Products.

Desiccant masterbatch is also used for increasing gloss of finished products with low energy consumption and improve production efficiency of the plastic products and increase strength and elongation. It can also increase filler loadings.

Desiccant Masterbatch helps to eliminate:

- Moisture
- Fish Eyes
- Porosity
- Windows/lenses in films;
- Silver streak in molding.

APPLICATION

- Lamination
- Blow Molding
- Injection Molding
- Raffia
- Tarpaulin
- Reprocessed Plastic Granules
